The GIBRALTAR™

Coal/Wood Convection Stove

GIBRALTAR™ The STANDARD

in Coal/Wood Convection Stoves

The Gibraltar coal/wood convection stove will produce from 27,000 BTU's to 70,000 BTU's per hour enabling you to heat up to 20,000 cu. ft. in an efficient, economic and elegant manner.*

- Air tight, plate steel, solid welded construction
- Designed to burn coal and wood
- Top or rear vent models
- Long burn time: up to 30 hours with coal, overnight with wood
- Low clearance to combustibles—18" side and rear
- Large ash pan with folding carrying handle
- Unique air wash system to help eliminate creosoting of glass
- Interchangeable interior cast iron components
- 15 year limited warranty

Economical Sensible Heating

This is an ideal stove for heating a medium size home or condominium. This stove is constructed with the finest materials available to give years of cost saving performance in a time of rapidly escalating utility bills. This Gibraltar is the standard in its class and has been developed to economically meet your home heating requirements.

Efficiency through Convection

This Gibraltar Coal/Wood Stove is constructed of a plate steel firechamber that is completely surrounded by a steel convection chamber. With the aid of a blower, you can circulate warm air more evenly throughout your home. The air tight design allows you to finely tune the rate of combustion. Also, the dual wall construction reduces clearance to combustibles—only 18" from sides or rear.

Coal and Wood Versatility

Whether you select this Gibraltar with the 96 lb. cast iron shaker grate or the 50 lb. cast wood grate, you are investing in a superb heater engineered to burn both fuels efficiently. Within minutes the wood grate can easily be substituted for the coal shaker grate should you choose to convert from the wood burning to the coal burning mode. The Gibraltar shaker grate enables you to thoroughly shake every square inch of the fuel bed evenly and simultaneously.

Handcrafted Beauty— Enhanced to Your Individual Taste

Beautiful cast iron doors have been hand crafted by a master pattern maker. Each comes standard with high impact ceramic glass tested to withstand 1400° continuous and 2000° intermittent operation. Also, optional solid brass doors, etched glass, and variable speed, rear-mounted blower are available.

Your Investment is Built to Last

Only the finest plate steel and gray iron castings are used in the manufacturing of the Gibraltar Coal/Wood Convection Stove. Engineering is so precise and quality control so rigid that movable parts can actually be interchanged. Except for periodic paint touch up, your Gibraltar will be virtually maintenance free.
