PetID

Regular physical examinations and vaccinations can help your dog to live a healthy, happy life. You can protect your dog from the following common infectious diseases by following your veterinarian's recommended immunization schedule.

Rabies — Caused by a virus that affects the brain and the central nervous system. It can be transmitted by direct contact with saliva from an infected animal, usually through a bite.

Distemper — A highly contagious often fatal virus. The distemper virus generally spreads through saliva, urine and feces.

Hepatitis — An infectious viral disease that can lead to severe liver damage or death. Spread through contact with infected urine, this disease is very serious in puppies and older dogs.

Parvovirus — A highly contagious viral infection of the intestinal tract that is spread through contact with the feces of an infected dog. The disease strikes quickly and is especially dangerous for puppies.

Coronavirus — A highly contagious intestinal disease. Symptoms include vomiting, diarrhea, fever and dehydration.

Leptospirosis — A bacterial disease that impairs kidney function and can lead to kidney failure. It is transmitted by contact with the urine of infected animals.

Parainfluenza — A viral respiratory infection responsible for kennel cough. Usually transmitted by contact with the nasal secretions of an infected dog. Puppies and older dogs are at a greater risk for complications than are healthy adult dogs.

Bordetellosis — A bacterial infection that is the primary cause of kennel cough. It can occur alone or in combination with other respiratory problems.

Lyme Disease — A complex bacterial disease that causes arthritis. Deer ticks transmit this disease.

To be used before : 12/2023

ANIMAL BITE QUARANTINE PROCEDURE

Your dog Samson (D#292-18) or cat ——— has been involved
name name
in a bite and /or scratch and is hereby quarantined **(CONFINED TO THE PREMISES)** for a period of TEN (10) days.

This quarantine period will start on 4/11/19 and will be released on or about 4/21/19.

*Animals on legal quarantine **MUST** be released by an Animal Control Officer or Health Department official, your animal will be considered on quarantine until a release is issued.

If there is any change in the animal's normal disposition such as:
unusual nervousness or irritability, tendency to bite and/or scratch without provocation, the dropping of the lower jaw, weakness of the legs, loss of appetite, and especially a prolonged twitching of muscles –

PLEASE CALL US IMMEDIATELY

CALL US IF THE AMIMAL RUNS AWAY OR DIES

In approximately ten (10) days following the bite or scratch an Animal Control Officer will check the animal and, at that time, will release the animal from quarantine only if the animal is determined to be normal and in a healthy state.

NOTICE

Once the animal has been placed under a ten (10) day quarantine and is either running at large or has been removed from the premises, the owner is subject to all appropriate State penalties for breaking this legal quarantine. Also, if the animal that is quarantined is involved in another bite this will be considered breaking the quarantine.

If this animal breaks quarantine and cannot be found, the owner will be issued a summons.

If there are any questions concerning this quarantine, please call **(609) 890-3825** or **(609) 890-3550** between the hours of 8:30am to 4:00pm.

THE ANIMAL THAT IS UNDER QUARANTINE SHOULD NOT BE GIVEN ANY ANTI-RABIES SERUM DURING THE QUARANTINE PERIOD.

Take Home Instructions

Canine Anesthetic Discharge

Samson -292 has been through a surgical procedure. He/she will need special attention for a full, uneventful recovery, just as a person would. Please read and review the following instructions. If you have any questions at any time, please call.

Activity: RESTRICTION! No running, jumping, playing or unneccessary stairs for 10 days. Outside only on a leash to do his/her business. No long walks or play. No bathing or swimming for a minimum of 14 days after surgery. Prevent access to stairs and furniture.

Diet: Only offer small amounts of food and water after ____7pm. If Samson -292 becomes sick to her stomach, discontinue food until the next morning.
You can resume Samson -292's normal diet the day following surgery, as long as she is able to keep food in and doesn't exhibit signs of illness.

Medications: Give all medications as directed.
Carprofen 75mg: Give by mouth 1 tablet every 12 hours for 4 days. Start tomorrow morning.
Gabapentin 100mg: Give by mouth 2 capsules every 8-12 hours for 5 days. Start tonight after 10pm

Incision Care: Please check the incision daily. **Please use as t-shirt instead of an e-collar**. Mild redness and swelling is a normal consequence of surgery and healing. If the incision becomes painful, opens or discharges pus or blood, call the clinic immediately. DO NOT allow Samson -292 to lick, chew, rub or pull at his/her sutures. If he/she does, you must stop the behavior right away. Please schedule a recheck in 10-14 days to have the sutures removed and/or the incision evaluated.

Samson -292 was a wonderful patient and we wish him a quick and easy recovery. If you have any questions or concerns, do not hesitate to call us at **609-890-6266**. If you have an emergency and the clinic is not available, please call NorthStar Vets at **609-259-8300**, or the VSEC at **215-750-7884**.

Diagnosis
ZDL660WOUND, ANIMAL BITE

Additional Client Instructions

Sampson has a wound under his right eye and 2 smaller wounds on his upper lip. I didn't see any broken teeth. We are sending him with antibiotics (Cephalexin one of each size) and Deramaxx for pain/inflammation. The wounds should scab up and heal on their own. He looked good on exam otherwise.

Take Home Instructions

Canine Mass Removal and Neuter Discharge

Samson -292 has been through a major surgery. He will need special attention for a full, uneventful recovery, just as a person would. Please read and review the following instructions. If you have any questions at any time, please call.

Activity: RESTRICTION! No running, jumping, playing or unneccessary stairs for 10 days. Outside only on a leash to do his business. No long walks or play. No bathing or swimming for a minimum of 14 days after surgery. Prevent access to stairs and furniture.

Diet: Offer no more than 1/4 amount of a normal meal and small amounts of water after 9 pm. If Samson -292 becomes sick to his stomach, discontinue food until the next morning. ***Do not feed AT ALL if nauseous tonight.***
You can resume Samson -292's normal diet tomorrow, as long as he is able to keep food in and doesn't exhibit signs of illness.

Medications: Give all medications as directed.
Gabapentin 300mg: Give by mouth 1 capsule every 12 hours for 7 days. Start tonight after 9pm.
Carprofen 75mg: Give by mouth 1 caplet every 12 hours for 4 days. Start tomorrow morning.

Incision Care: Please check the incisions daily. Mild redness and swelling is a normal consequence of surgery and healing. If the incision becomes painful, opens or discharges pus or blood, call the clinic immediately. DO NOT allow Samson -292 to lick, chew, rub or pull at his sutures. If he does, you must stop the behavior right away and keep the e-collar on. Please schedule a recheck in 10-14 days to have the sutures removed and/or the incision evaluated.

Samson -292 was a wonderful patient and we wish him a quick and easy recovery. If you have any questions or concerns, do not hesitate to call us at **609-890-6266**. If you have an emergency and the clinic is not available, please call NorthStar Vets at **609-259-8300**, or the VSEC at **215-750-7884**.

IDEXX SERVICES: **75 TOTAL HEALTH PLUS**

ENDOCRINOLOGY

TEST	RESULT	REF.RANGE/UNITS
Total T4 [d]	2.3	(1.0 - 4.0) ug/dL

NOTES

CHEMISTRY

a BOTH SDMA AND CREATININE ARE WITHIN THE REFERENCE INTERVAL which indicates kidney function is likely good. Evaluate a complete urinalysis and confirm there is no other evidence of kidney disease.

b Index of ++++ may increase AST and CPK by 25-50%, and decrease ALP by >50%, decrease Total and Direct Bilirubin by 25-50%, and decrease SDMA by 10-25%.

c Index of N, 1+, 2+ exhibits no significant effect on chemistry values.

ENDOCRINOLOGY

d Dogs with no clinical signs of hypothyroidism and results within the reference interval are likely euthyroid. For dogs on thyroid supplement, recommended therapeutic levels are 2.1-5.4 ug/dL.

PET OWNER: **A/C HAMILTON TWP** DATE OF REPORT: **04/23/2019** ACCESSION # 1803028292

IDEXX SERVICES: **75 TOTAL HEALTH PLUS, 2463 FECAL OVA AND PARASITES WITH GIARDIA***

PARASITOLOGY

TEST	RESULT
Ova & Parasites - Zinc Sulfate Centrifugation [e]	No ova or parasites seen.
Giardia Antigen	NEGATIVE

NOTES

CHEMISTRY

a BOTH SDMA AND CREATININE ARE WITHIN THE REFERENCE INTERVAL which indicates kidney function is likely good. Evaluate a complete urinalysis and confirm there is no other evidence of kidney disease.

b Index of ++++ may increase AST and CPK by 25-50%, and decrease ALP by >50%, decrease Total and Direct Bilirubin by 25-50%, and decrease SDMA by 10-25%.

c Index of N, 1+, 2+ exhibits no significant effect on chemistry values.

ENDOCRINOLOGY

d Dogs with no clinical signs of hypothyroidism and results within the reference interval are likely euthyroid. Occasionally, hypothyroid dogs can have a low normal T4 (1-2 ug/dL). Hypothyroidism may be further assessed in these dogs by adding a free T4 and canine TSH. For dogs on thyroid supplement, recommended therapeutic levels are 2.1-5.4 ug/dL. If this sample was drawn 4-6 hours post-pill in a dog on thyroid supplement, a low normal T4 suggests inadequate supplementation.

PARASITOLOGY

e In cases of acute or chronic diarrhea in addition to a fecal flotation and antigen testing for ova and parasites consider testing for viral, bacterial and protozoal infectious agents using RealPCR (canine diarrhea panel: test code 2625; feline diarrhea panel: test code 2627).

PRIORITY CYTOLOGY w/ DESC

Test	Result
PATHOLOGIST REPORT	SOURCE/HISTORY: 3 slides representing left prescapular and left and right popliteal lymph nodes. Patient has generalized lymphadenopathy. MICROSCOPIC DESCRIPTION: The smears are cytologically similar. Cellularity is high consisting predominantly of relatively uniform intermediate to large lymphoid cells (greater than 85%) within a background of lymphoglandular bodies and blood. The cells have small amounts of basophilic cytoplasm and irregularly round nuclei that are 2-3 times the size of an erythrocyte with multiple pale basophilic nucleoli. Occasional mitotic figures are found. Occasional macrophages, many of which demonstrate cytophagia, are present. MICROSCOPIC INTERPRETATION: Lymphoma COMMENTS: The homogeneous population of intermediate to large lymphoid cells is consistent with a cytologic diagnosis of lymphoma. Lymphoma may ultimately involve all lymph nodes or other organs such as liver, spleen or bone marrow. Consider evaluation of these sites for additional staging information, if not already done. Immunophenotype (B- versus T-cell lymphoma) has been shown to be a useful prognostic indicator for length of first remission and survival in dogs with lymphoma. Immunophenotyping of lymph node aspirates by flow cytometry is recommended to distinguish B-cell and T-cell lymphoma. Additional aspirates collected in a fluid suspension are required for flow cytometry. Samples for flow cytometry are fragile, and these should be collected and shipped directly, priority overnight, to Colorado State University or other university lab of your choice. See http://csu-cvmbs.colostate.edu/academics/mip/ci-lab/Pages/Flow-Cytometry-Instructions.aspx for additional sample collection and shipping requirements. Alternatively, confirmation of lymphoma and differentiation of B versus T-cell lymphoma can be done via biopsy with histologic examination and immunohistochemistry or lymphoma PCR (PARR). PARR is 75% sensitive in dogs, so approximately 25% of patients with lymphoma will have a false negative result with this test. Although less sensitive (67-75%) for accurately immunophenotyping lymphoma than flow cytometry (91-100%), PARR is still considered acceptable for immunophenotyping lymphoma in dogs, and can be done on previously stained slides (test code 1933). Please call IDEXX Customer Service to add this test code, if desired, at 1-888-433-9987. Reference: Thalheim L, Williams LE, Borst LB, Fogle JE, Suter SE. Lymphoma immunophenotype of dogs determined by immunohistochemistry, flow cytometry, and polymerase chain reaction for antigen receptor rearrangements. J Vet Intern Med. 2013 Nov-Dec;27(6):1509-16. PATHOLOGIST: Sarah Schmidt, DVM Diplomate, American College of Veterinary Pathologists
