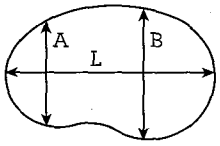
Hayward® Universal H-Series Heater:

Superior comfort, reliability and energy efficiency.

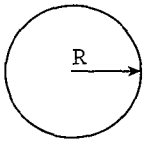
SELECTING THE CORRECT SIZE H-SERIES HEATER:

FOR YOUR SWIMMING POOL

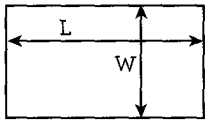
Determine your pool's surface area in square feet:



Area = (A+B) x L x .45



Area = R x R x 3.14



Area = L x W

MODEL	SURFACE AREA
H500	1,350
H400	1,200
H350	1,050
H300	900
H250	750
H200	600
H150	450

In this table, locate the surface area that is equal to, or just greater than, the pool's surface area. To the left of this number is the appropriate Universal H-Series model that will fit the selected area.

For indoor pool installations, divide the pool's surface area by 3.

Table is based on a 30°F temperature rise, 3-1/2 mph average wind velocity and elevation of up to 2,000 feet above sea level.

FOR YOUR SPA OR HOT TUB

Determine your spa capacity in gallons (surface area x average depth x 7.5). The reference table lists the time required in minutes to raise the temperature of the spa/hot tub by 30°F. In the table below, locate the column with the spa/tub size in gallons that is closest to yours. Select the desired time to raise the spa/hot tub temperature 30°F, read to the left and select the appropriate Universal H-Series model. This guide can be adjusted for other temperature rises. For example, if you desire a 15°F increase in temperature, simply divide the time for 30°F rise by the ratio of 30/15, or 2. (**Note:** Heat lost and/or heat absorbed by spa walls or other objects will add to the time it takes the spa to heat up.) Spa sizing is based on an insulated and covered spa. Always cover your spa or hot tub when not in use to minimize heat loss and evaporation.
