ENGINEERING REPORT

Re: Structural Review of new steel beam to support first floor framing
1731 Forge Pond Road
Brick, NJ

Dear Sirs,

Pursuant to your request we performed a site visit to the above referenced project on Wednesday, February 25, 2004 to review the installation of the new steel beam to support the second floor framing. It is our understanding the weld connection between the steel plate and the steel beam was questioned by the building inspector.

The weld between the steel plate and steel beam bottom flange was specified to be 1/4inch fillet weld with a length of 2inches long spaced at 6inches on center. This is also known as a stitch weld. We reviewed the stitch weld in the field and found the length of the welds to be 3inches and the spacing of the welds to be 3inches on center staggered. The actual weld pattern provides adequate strength to support the code loading and we take no exception to the field welds. We have attached the digital photos taken at the site during our site visit.

Sincerely,

Kevin C. Sommons, PE
Principal
