

In this position, you will work as a member of the Software Development department who handles software development, ERP, integrations, cloud software, database administration, and change management for the university. The team develops not only custom software solutions, but also integrates with and enhances third-party solutions supporting the university's software ecosystem. You will partner and collaborate with these teams to create, design, build, and document various user experiences and designs for applications across the university and our medical schools. This is a crucial role on a collaborative team making a big difference in a broad community.
