I was off today (Vacation Day) saw the message when I got in.

Should testing remain on days or go back to nights ?

On the construction side not a problem. Going forward will preschedule/post alerts for fire pump acceptance tests (construction) similar to fire hydrant tests.

I will defer to Tommy on the maintenance (fire code) side.

John,

Yes, I called this morning, but your phone was off and haven't had a chance to send this email. Yes, if you could please have fire flow tests and maintenance tests can be prearranged, that would end a huge headache for me and I can send out alerts in advance.

We stirred up the main on Friday and it was a weekend of complaints. Z's alert was pretty accurate that people were trying to save water and it was dirty all weekend. That being said, we are going to flush this week and try to stay on a 6 month cycle so hopefully this doesn't happen with the same intensity as it did this weekend.

Thank you for reaching out.

Cliff

Hi Cliff,

Received the alert regarding water discoloration. I believe the test you are referring to is the building fire pump acceptance test for 55 West Front/The Element.

Do you want to go back to night testing as was done in the past ?, Require all contractors to prearrange fire pump tests similar to hydrant flow tests ? Please let me know so all involved can be apprised of the procedure. Keep in mind this effects not only construction tests but maintenance tests and Ive copied Tom Welsh.
